

Ten Minute Tech

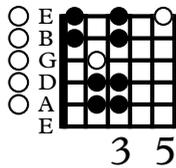

The A Minor scale

A Minor (with open strings)

A Minor (2 Octaves)

Now we will extend the scale to include another octave. Remember, the distance between two A's is always thought of as octave (as in "8"- octagon, octopus etc) because if we play the scale- A B C D E F G A we have 8 notes! But no matter how many notes we play though, the distance between one A and the next A is always thought of as an octave. And we call the distance between two notes an "interval".
